

ENVIRONMENTAL RESPONSIBILITY

Starline is committed to providing quality products in a manner that minimizes our potential impact on the environment. We will operate in compliance with all relevant environmental legislation. Starline will strive to use pollution prevention and environmental best practices in our operations.

Starline will integrate the consideration of environmental concerns and impacts into all of our decision-making and activities. We will promote environmental awareness among our employees and encourage them to work in an environmentally responsible manner. Starline will train, educate and inform our employees about environmental issues that may affect their work. We will work to reduce waste through re-use and recycling and by purchasing recycled, recyclable or re-furnished products and materials where these alternatives are available, economical and suitable. Starline promotes efficient use of materials and resources throughout our facility including water, electricity, raw materials and other resources, particularly those that are non-renewable. We avoid unnecessary use of hazardous materials and products, seek substitutions when feasible, and take all reasonable steps to protect human health and the environment when such materials may be used. We purchase and use environmentally responsible products accordingly. Should there be a significant health, safety or environmental hazard, or if legislation requires, we develop and maintain appropriate emergency and spill response programs.

Starline encourages adopting the same environmental commitment to our factories, customers and the general public. We strive to continually improve our environmental performance and minimize the social impact and damage of activities by periodically reviewing our environmental policy in light of our current and planned future activities.
